

TRACKPLAN

COACH PACK

WRITTEN BY A COMPETING ATHLETE

150 LESSONS FOR TRACK & FIELD COACHES

Ready-to-use AI prompts for season plans, sessions for every event group, youth coaching, meet preparation and club admin.

10 CHAPTERS

150 PROMPTS

INSTANT USE WITH ANY AI

WHY THIS PACK EXISTS

FROM THE TRACK, FOR COACHES

I compete in athletics in Belgium. Every week I see coaches spend hours on plans, session ideas and messages to parents, time they would rather spend on the track.

AI can do the heavy lifting, but only if you ask the right way. This pack gathers 150 prompts written with real athletics in mind: periodization, block starts, approach runs, tapering, youth groups and the admin around a club.

Fill in the brackets with your athletes' details, paste the prompt into any AI assistant and keep your coaching judgement in charge.

HOW TO USE IT

FOUR STEPS, TWO MINUTES

1. **Pick a prompt** from the chapter that matches your task.
2. **Replace every** [bracket] with real details: ages, times, dates, facilities. Specific input gives specific answers.
3. **Paste it** into ChatGPT, Claude, Gemini or Copilot. Free versions work.
4. **Refine it.** Ask "shorter", "for 14-year-olds" or "as a table". The first answer is a draft; you know your athletes, the AI does not.

> **Important:** AI output is general guidance, not medical advice. For injuries, pain, nutrition plans or health conditions, refer athletes to a qualified professional.

CONTENTS

TEN CHAPTERS, EVERY PART OF COACHING

01	Season Planning & Periodization	15 prompts
02	Sprints & Hurdles Sessions	15 prompts
03	Middle & Long Distance Sessions	15 prompts
04	Jumps	15 prompts
05	Throws	15 prompts
06	Warm-ups, Drills & Injury Prevention	15 prompts
07	Youth Athletics & Group Management	15 prompts
08	Meet Preparation & Race Strategy	15 prompts
09	Communication, Motivation & Mental Skills	15 prompts
10	Club Admin: Parents, Recruitment & Social Media	15 prompts

01

SEASON PLANNING & PERIODIZATION

Turn a meet calendar into a structured season, without spending your Sunday on spreadsheets.

01 Full season outline

Act as an experienced track and field coach. Build a season plan for a [event group] group of [number] athletes aged [age range], training [sessions] times per week. The main competition is on [date] and the season starts on [date]. Split the season into general preparation, specific preparation, competition and taper phases. For each phase, give its dates, its goal, the main session types and how weekly volume should change.

02 Meet calendar priorities

Here is my meet calendar: [list of meets with dates]. Classify each meet as A (peak), B (important) or C (training race) for a [event group] athlete whose main goal is [goal]. Explain the reasoning and how training should change in the week before each type of meet.

03 Weekly microcycle

Design a 7-day training week for a [level] [event] athlete in the [phase] phase, with [sessions] sessions and [rest days] rest days. Balance high-intensity, low-intensity and strength days so that no two hard sessions are back to back. Present it as a table with day, session, purpose and approximate duration.

04 Recovery week

My [event group] athletes have completed three hard weeks in the [phase] phase. Design a recovery week that reduces load by about [percentage] % while keeping speed and technique sharp. Explain what to keep, what to cut and how athletes should feel by the end of the week.

05 Taper plan

Create a [number]-day taper for a [event] athlete before [competition]. Their normal week includes [describe normal week]. Show day by day what to keep, what to shorten and what to remove, and explain the purpose of each change.

06 Double peak season

I need my athletes to peak twice: for [first meet] on [date] and [second meet] on [date]. Build a plan that allows two peaks, with a short rebuild block in between. Point out the main risks of this approach and how to manage them.

07 Indoor to outdoor transition

My [event group] athletes finish the indoor season on [date] and start outdoors on [date]. Plan the transition weeks: rest, rebuild, and how to adapt sessions from indoor to outdoor conditions.

08 Off-season plan

Write a [number]-week off-season plan for [level] athletes who just finished their season. Goals: physical and mental recovery, fixing weaknesses ([weaknesses]) and building a general base. Keep it enjoyable and varied.

09 Training age adjustment

I coach athletes with very different training ages: [describe athletes]. Take this session: [session]. Write three versions of it, for a first-year athlete, a second or third-year athlete and an experienced athlete, and explain the differences.

10 Limited facilities

We train at [facility description] with no access to [missing facility, e.g. a track, a gym, hurdles]. Adapt this week of training for [event group] so the goals stay the same: [paste week].

11 Load monitoring system

Suggest a simple way to monitor training load for a group of [number] athletes using only a phone and a shared spreadsheet. Include what each athlete should record after every session, how I calculate weekly load and which warning signs should make me reduce training.

12 Testing calendar

Propose a testing schedule across the season for [event group] athletes. Choose 4 to 6 simple field tests (for example a 30 m sprint or a standing long jump), say when to run each one and how to use the results to adjust training.

13 Multi-event planning

I coach a [heptathlete / decathlete / combined events athlete] training [sessions] times per week. Build a weekly structure that rotates all events fairly, with the athlete's weaker events ([events]) getting priority.

14 Return after a break

One of my athletes is returning after **[number]** weeks off because of **[reason, e.g. exams or illness, not an injury]**. Write a progressive 4-week return plan that rebuilds fitness safely before normal training resumes.

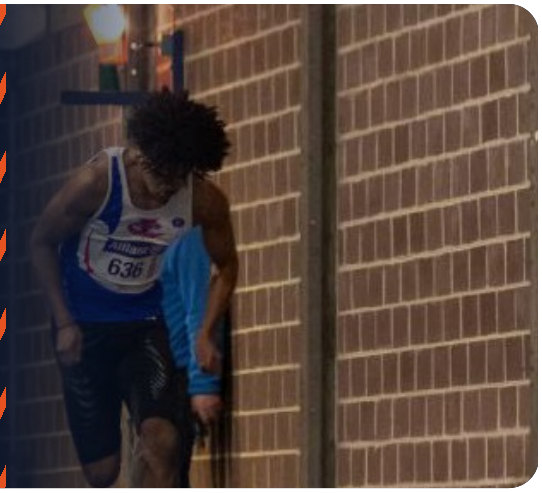

15 Season review

Here are my notes and results from this season: **[paste notes and results]**. Analyse what worked, what did not and what I should change next season. Finish with five concrete decisions for next year.

02

SPRINTS & HURDLES SESSIONS

Speed, acceleration and rhythm sessions you can adapt to any level in seconds.

16 Acceleration session

Design an acceleration session for [level] sprinters in the [phase] phase. Include a warm-up, 2 or 3 technical drills, the main set with distances and recoveries, and coaching cues for the first 10 metres.

17 Max velocity session

Create a maximum velocity session for [level] 100 m sprinters. Use flying sprints with a run-in, and give the distance, the number of reps, full recoveries and how to tell the session should stop because speed is dropping.

18 Speed endurance

Write a speed endurance session for 200 m athletes in the [phase] phase. Explain the energy system it targets, the intensity, the recoveries and how athletes should feel at the end.

19 Block start progression

Give me a 6-week progression for teaching block starts to [age group] athletes who have never used blocks. Include weekly drills, common mistakes and simple cues.

20 400 m race model

My athlete runs the 400 m in [time] and wants to run [target time]. Using typical split differences, suggest target splits for each 100 m and design two sessions that train the second half of the race.

21 Hurdle rhythm session

Design a hurdle rhythm session for [110 m / 100 m / 400 m] hurdlers at [level]. Include hurdle heights, spacing adapted to their level, number of reps and cues for the three-step rhythm.

22 Hurdles for beginners

Create a fun introduction to hurdling for [age group] athletes using low hurdles or mini-hurdles. Make it a 45-minute session with games, and focus on attacking the hurdle without fear.

23 Relay changeovers

Plan a relay session for a 4×100 m team. Include changeover zone rules, how to set check marks, the voice signal, 3 drills and a way to measure each changeover's quality.

24 Sprint drills library

List 12 sprint drills, grouped into posture, front-side mechanics and ground contact. For each one, give a one-line description, the purpose and the most common mistake.

25 Resisted and assisted sprints

Explain how to use sled sprints, hill sprints and downhill sprints for [level] sprinters. Give guidelines for load or slope, distances, and when in the season to use each method.

26 Sprint session in bad weather

It is [cold / raining / windy] and we only have [space available]. Give me an indoor or sheltered sprint session that still develops [quality] for [number] athletes.

27 Curve running

Write a session to improve bend running for 200 m athletes, with drills, the main set and cues about lean and arm action.

28 Reaction and starts game

Invent 5 reaction-start games for a group of [number] young sprinters aged [age]. Each game should take 5 minutes and need no equipment except cones.

29 Sprint technique feedback

I filmed my athlete sprinting. Here is what I see: [describe posture, arm action, foot strike]. Explain what these observations suggest and give 3 cues and 2 drills to fix the main problem.

30 Short-to-long vs long-to-short

Compare the short-to-long and long-to-short approaches for training [100 m / 200 m / 400 m] athletes. Recommend one for my group, based on: [describe athletes, schedule and goals].

03

MIDDLE & LONG DISTANCE SESSIONS

Intervals, tempo runs and race-pace work, calculated for your athletes' real times.

31 Pace calculator session

My athlete's 1500 m best is [time]. Calculate their approximate pace for 400 m reps at 1500 m pace, 800 m pace and 3000 m pace, then build a session mixing two of these paces.

32 Threshold session

Design a threshold session for a [level] [event] runner. Explain how to find threshold pace without a lab test, then give two session options: continuous and broken into reps.

33 VO2max intervals

Write 3 different VO2max interval sessions for [level] middle-distance runners, each lasting about [duration] minutes of work. Include recoveries and the expected effort level.

34 800 m specific session

Create a session specific to the 800 m for an athlete with a best of [time], combining speed and lactic tolerance. Include target times for each rep.

35 Long run guidance

How long should the weekly long run be for a [age]-year-old [event] runner training [sessions] times per week? Give a progression over [number] weeks and guidance on pace and terrain.

36 Fartlek sessions

Invent 5 fartlek sessions that a group of [level] runners can do in a park, each with a different goal. Describe them so athletes can follow them without me being there.

37 Hill session

Design a hill session for distance runners in the [phase] phase. Give hill length, gradient, effort, recovery and technique cues for uphill running.

38 Steeplechase introduction

Create a 4-week introduction to the steeplechase for [level] athletes: barrier clearance, the water jump, and how to fit these drills into normal training.

39 Cross-country block

Plan a [number]-week cross-country block for [age group] runners, with one key session per week, strength work and race-specific preparation for muddy courses.

40 Race tactics

My athlete runs the [event] in [time]. In their next race the field ranges from [time] to [time]. Suggest 2 race plans: one if the pace is fast and one if it is tactical. Include positioning advice.

41 Mileage progression

My athlete currently runs [distance] km per week. Plan a safe progression to [target] km per week over [number] weeks, including recovery weeks.

42 Easy pace explained

Write a short, convincing explanation for teenage runners about why easy runs must really be easy, with a simple way to check their pace (for example the talk test).

43 Session for mixed abilities

I have runners with 1500 m bests from [time] to [time] in the same group. Design one session where everyone works at the right intensity but finishes at about the same time.

44 Kick finish training

Give me 3 sessions that develop a strong finishing kick for [event] runners, and explain when in the season to use each one.

45 Training log analysis

Here is my athlete's training log for the last [number] weeks: [paste log]. Identify trends, warning signs of overtraining and what to change next week.

04
JUMPS

Approach work, take-off drills and plyometrics for long, triple, high jump and pole vault.

46 Long jump approach

Explain how to build and measure a long jump approach for a [level] athlete. Include the number of strides, how to set check marks and a session to make the run-up consistent.

47 Take-off drills

List 8 take-off drills for [long jump / triple jump / high jump] with a description, the purpose and a coaching cue for each.

48 Triple jump phases

My triple jumper's phases are roughly [hop distance], [step distance], [jump distance]. Is this ratio balanced for their level? Suggest drills to fix the weakest phase.

49 High jump curve

Teach me how to set up a J-curve approach for a [left / right]-footed high jumper. Give the measurements to start with and 3 drills for the curve.

50 Fosbury flop for beginners

Design a safe 4-session progression to teach the Fosbury flop to [age group] athletes, starting from scissors jumps and using a [mat description].

51 Pole vault introduction

Create a safe introduction to pole vault for beginners who have [equipment available]. Include progressions, essential safety rules and when to involve a specialist coach.

52 Plyometric progression

Build a 6-week plyometric progression for [level] jumpers, from low-intensity hops to bounding and depth jumps. Give the number of foot contacts per session.

53 Short approach session

Design a short-approach session for [event] focusing on [technical goal]. Include the number of jumps, recoveries and what to watch for.

54 Jumps session without a pit

We have no sand pit or high jump mat today. Give me a 60-minute jumps session that still develops take-off power and technique.

55 Competition warm-up for jumpers

Write a competition warm-up routine for a [event] athlete, timed backwards from the start of the competition. Include approach run-throughs and how to adjust check marks for wind and surface.

56 Foul analysis

My long jumper fouled [number] out of [number] jumps last competition, usually by about [distance]. Explain the likely causes and give a plan to fix it in training.

57 Flight and landing technique

Explain the hang and hitch-kick techniques in the long jump. Which one fits a [level] athlete who jumps about [distance]? Give drills for the landing.

58 Strength for jumpers

Design a twice-weekly strength programme for [level] jumpers in the [phase] phase, balancing maximal strength and power. Include exercises, sets and reps.

59 Jump competition tactics

How should a [event] athlete manage their attempts in a competition with [number] attempts? Cover the first jump, adjusting after fouls and the mental approach between jumps.

60 Mental cues for jumpers

Write 10 short focus cues a jumper can use just before the approach, adapted to an athlete who tends to [describe problem, e.g. overthink, slow down before take-off].

05
THROWS

Shot put, discus, javelin and hammer: technique, drills and strength made simple.

61 Shot put technique session

Design a shot put session for [level] athletes using the [glide / rotational] technique. Include standing throws, partial movements, full throws and coaching cues.

62 Discus progression

Create a step-by-step progression to teach the discus throw to beginners, from standing throws to the full turn, in [number] sessions.

63 Javelin for beginners

Plan a safe javelin introduction for [age group] athletes using [turbo javelins / vortex / real javelins]. Include grip, the run-up, the delivery and strict safety rules for the group.

64 Hammer throw introduction

Give me a safe introduction to the hammer throw for athletes aged [age], including winds, turns, the cage and safety rules.

65 Throws drills library

List 10 drills for [event], each with a purpose, a description and the most common mistake.

66 Medicine ball session

Design a 45-minute medicine ball session for throwers that develops power in all directions, with exercises, weights, sets and reps.

67 Strength for throwers

Write a strength programme for [level] throwers training [number] times per week in the [phase] phase. Include Olympic lifts or simpler alternatives if athletes are beginners.

68 Throwing session in bad weather

It is too wet to throw safely outside. Give me an indoor session for throwers using [equipment available].

69 Technical fault diagnosis

My [event] thrower does this: [describe the movement]. What is the likely technical fault, and what 2 drills and 3 cues will fix it?

70 Throws competition warm-up

Write a competition warm-up for a [event] thrower, from arrival at the venue to the first attempt, including the number of practice throws.

71 Implement weights

Explain how and when to use heavier and lighter implements in training for [event] athletes, with a weekly example.

72 Rotational vs glide

Compare the glide and rotational shot put techniques for my athlete: [height, strength level, experience]. Which should they use and why?

73 Throws for multi-eventers

My combined events athletes only have [time] per week for throws. Give a minimal but effective plan covering shot put, discus and javelin.

74 Throwing volume

How many throws per session and per week are appropriate for a [age]-year-old [event] thrower in each phase of the season?

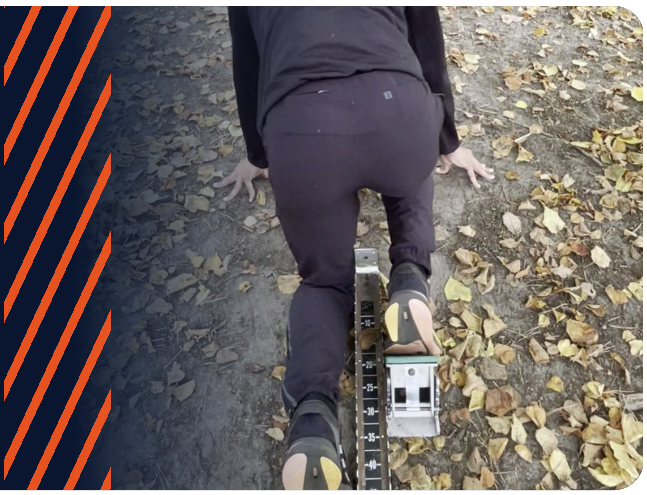

75 Shoulder and elbow care

Suggest a 10-minute prehab routine for javelin throwers to do before each session, with exercises for the shoulder, elbow and trunk. Remind me what pain signals mean they should see a professional.

06

WARM-UPS, DRILLS & INJURY PREVENTION

Smarter warm-ups and prevention routines that athletes actually do.

76 Standard warm-up

Write a 20-minute dynamic warm-up for [event group] athletes, split into jogging, mobility, activation, drills and strides. Include the duration of each part.

77 Warm-up for cold days

Adapt my standard warm-up for training outside at [temperature] degrees. What should be added or extended?

78 Hamstring prevention

Design a twice-weekly hamstring prevention routine for sprinters, with exercises such as Nordic curls, progressions and weekly volume. Note that it does not replace medical advice.

79 Shin splint prevention

My distance runners often complain about shin pain. Give me a prevention checklist (load, surfaces, shoes, strength) and a 10-minute strength routine for the lower leg. Tell me when they must see a physiotherapist.

80 Mobility routine

Create a 15-minute mobility routine for hurdlers and jumpers focusing on hips and ankles, to do on rest days.

81 Core stability circuit

Design a 12-minute core circuit for track athletes with 8 exercises, an easy and a hard version of each, and timing.

82 Cool-down routine

Write a 10-minute cool-down that athletes will actually do after hard sessions, and explain briefly why it helps.

83 Drills with no equipment

List 15 running drills that need no equipment, grouped by goal, with a short description so athletes can do them alone.

84 Growth spurt athletes

Some of my athletes aged [age range] are going through growth spurts. How should I adapt training load, jumping volume and strength work for them?

85 Return to training checklist

Write a checklist I can use to decide whether an athlete returning from a minor niggle is ready for full training, and remind me that a medical professional should clear any real injury.

86 Sleep and recovery education

Write a one-page guide for teenage athletes about sleep, nutrition timing and recovery, in simple language with 5 practical tips.

87 Strength basics for youth

Design a bodyweight strength programme for [age group] athletes, twice a week, focused on safe technique before adding any load.

88 Footwear and spikes guide

Explain to beginner athletes and their parents which shoes and spikes they need for [event group], when to use them and how to avoid problems from switching to spikes too fast.

89 Session adjustment for fatigue

An athlete tells me they feel [describe fatigue, sleep, soreness]. Here is today's planned session: [session]. Suggest how to modify it.

90 Injury prevention audit

Here is a typical training week for my group: [paste week]. Review it for injury risk factors (load spikes, lack of recovery, surfaces) and suggest changes.

07

YOUTH ATHLETICS & GROUP MANAGEMENT

Games, progressions and organisation for coaching kids and large groups.

91 Fun session for U10s

Plan a 60-minute athletics session for [number] children aged [age] with running, jumping and throwing games. Use minimal equipment: [equipment].

92 Games that teach skills

Invent 10 games that teach athletics skills (speed, reaction, coordination, jumping, throwing) to children aged [age]. Give rules and the skill each game develops.

93 Large group organisation

I coach [number] kids with [number] helpers on [space]. Design a station rotation for a 75-minute session, with timing, groups and what each helper does.

94 Skill progression by age

Describe what technical skills athletes should learn at U8, U10, U12, U14 and U16 in [event group], and what to avoid introducing too early.

95 Kids competition format

Design a fun team competition format for [number] children aged [age], where everyone takes part and effort counts as much as results.

96 Session plan template

Create a reusable session plan template for youth athletics with sections for goals, warm-up, main activities, game, cool-down and notes.

97 Keeping teenagers engaged

My [age]-year-old athletes are losing motivation and some are quitting. Suggest 10 practical ideas to keep them engaged, based on what teenagers value.

98 Behaviour management

Give me strategies to handle a group where [describe behaviour problem] without killing the fun of the session.

99 Including all levels

In my group, some kids are very fast and others struggle. How can I organise sessions so everyone progresses and nobody feels left out?

100 First session of the season

Plan the first session of the season for a new group of [age] athletes, including an icebreaker, simple testing and setting group rules.

101 Event discovery block

Design a 6-week block where young athletes try every event group, one per week, and write a short note I can send to parents about it.

102 Coaching helpers

Write a one-page briefing for parent helpers at training: safety, how to give feedback to children and what not to do.

103 Talent vs early maturity

Explain how to tell a talented young athlete from one who is simply more physically mature than their peers, and how this should change my coaching.

104 Long-term development message

Write a short explanation of long-term athlete development that I can share with ambitious parents who want their child to specialise early.

105 End-of-session routine

Create a 5-minute end-of-session routine for kids that includes cool-down, a short recap of what they learned and a positive closing ritual.

08

MEET PREPARATION & RACE STRATEGY

From entry lists to the call room: everything around competition day.

106 Competition day timeline

My athlete competes in [event] at [time] at [venue]. Build a timeline for the day: wake-up, meals, travel, arrival, warm-up start, call room and competition.

107 Pre-race nutrition

Give simple, general pre-competition nutrition guidelines for a [age]-year-old [event] athlete competing at [time], with examples of what to eat and when. Recommend a qualified professional for personal advice.

108 Meet checklist

Create a printable checklist of everything a [event group] athlete should pack for a competition, including documents, spikes and food.

109 Heats and finals

My athlete must run heats at [time] and the final at [time]. Plan how they should recover, eat and re-warm up between rounds.

110 Race plan for a debut

Write a simple race plan for an athlete running their first ever [event]. Keep it to 5 bullet points they can remember.

111 Managing nerves

Give me 5 techniques I can teach athletes to manage pre-competition nerves, with a short script for each one.

112 Weather adjustments

The forecast for the meet is [weather]. How should my [event group] athletes adjust their warm-up, clothing and race strategy?

113 Post-race debrief

Create 6 questions I can ask athletes after a race to help them reflect, whatever the result, and a template to record their answers.

114 Championship preparation

My athlete qualified for [championship] on [date]. Plan the last 3 weeks: training, rest, mental preparation and logistics.

115 Entry selection

Here are my athletes and their best marks: [list]. Help me decide which events each should enter at [meet] to maximise team points without overloading anyone.

116 Call room briefing

Write a short briefing for young athletes about what happens in the call room and at the start line, so their first big meet is less stressful.

117 Results analysis

Here are my athletes' results from [meet]: [paste results]. Compare them to their previous bests, highlight progress and suggest training focuses.

118 Wind and conditions

Explain wind-legal marks and how wind affects sprint and jump results, in language a teenage athlete will understand.

119 Travel competition plan

We are travelling [distance or duration] for a meet with an overnight stay. Write a plan covering travel, sleep, meals and keeping athletes fresh.

120 Personal best strategy

My athlete is close to a personal best of [mark] in [event]. Which upcoming meets and conditions give the best chance, and how should we prepare?

09

COMMUNICATION, MOTIVATION & MENTAL SKILLS

The right words for athletes, before and after the big moments.

121 Goal setting session

Run me through a 30-minute goal-setting session with my athletes, with outcome, performance and process goals, and a worksheet they can fill in.

122 Feedback after a bad race

My athlete just had a disappointing race: [describe]. Write what I should say right after the race and in a conversation the next day.

123 Motivational talk

Write a 2-minute talk for my team before [event or meet], authentic and not cheesy, adapted to athletes aged [age].

124 Visualisation script

Write a 5-minute visualisation script for a [event] athlete to use the night before a competition.

125 Handling a plateau

An athlete has not improved in [time period] and is frustrated. Help me explain plateaus and suggest changes to training and mindset.

126 Confidence routine

Create a pre-performance routine that builds confidence for an athlete who [describe problem, e.g. freezes in big races].

127 Individual check-in questions

Give me 10 questions for monthly one-to-one check-ins with athletes, covering training, school or work, wellbeing and goals.

128 Explaining a training decision

I decided to [decision, e.g. move an athlete to another group or skip a meet]. Write a clear and kind way to explain it to the athlete.

129 Team culture

Help me define 5 team values for my club group and suggest one concrete habit to bring each value to life every week.

130 Burnout warning signs

List the warning signs of burnout in young athletes and suggest how to talk to an athlete I am worried about. Remind me when to involve parents or a professional.

131 Celebrating progress

Suggest 8 ways to recognise effort and progress in my group that do not depend only on winning.

132 Weekly athlete message

Write this week's message to my athletes: training reminders [details], an upcoming meet [details] and one piece of advice about [topic].

133 Coaching style reflection

Here is how I usually coach: [describe]. What are the strengths and blind spots of this style, and what could I try differently?

134 Self-talk training

Create a short exercise to help athletes replace negative self-talk with useful cues during hard sessions and races.

135 Leadership roles

How can I give older athletes leadership roles in the group? Suggest roles, responsibilities and how to support them.

10

CLUB ADMIN: PARENTS, RECRUITMENT & SOCIAL MEDIA

The admin that eats your evenings, handled in minutes.

136 Parents welcome letter

Write a welcome letter for parents of new athletes at [club name]: training times, what to bring, how to contact me and how they can help.

137 Difficult parent email

A parent wrote this to me: [paste email]. Write a calm, professional reply that addresses their concern and sets clear boundaries.

138 Training schedule announcement

Write a clear message announcing changes to the training schedule: [changes]. Make it short enough for a group chat.

139 Recruitment post

Write a social media post to recruit new athletes aged [age range] to [club name]. Include training times, location and a call to action.

140 Meet results post

Turn these results into an engaging social media post that celebrates the whole team: [paste results].

141 Monthly newsletter

Write the monthly club newsletter with these items: [items]. Keep it friendly and scannable.

142 Content calendar

Create a one-month social media calendar for an athletics club, with 3 posts per week, mixing results, training tips, athlete spotlights and announcements.

143 Athlete spotlight

Write a short athlete spotlight post about [athlete], who [achievement or story]. Ask me 3 questions first if you need more information.

144 Fundraising ideas

Suggest 10 fundraising ideas for an athletics club with [number] members and [describe resources], with the effort and potential money for each.

145 Sponsor proposal

Write a one-page sponsorship proposal for a local business, explaining what the club offers in return for [amount] per season.

146 Volunteer request

Write a message asking parents to volunteer as officials or helpers at our home meet on [date], making it easy for them to say yes.

147 Code of conduct

Draft a code of conduct for athletes, parents and coaches at a youth athletics club. Keep it to one page.

148 Meet invitation

Write an invitation to other clubs for our meet on [date] at [venue], with the event programme, entry details and deadline.

149 Grant application help

Help me draft the main section of a grant application for [project, e.g. new hurdles or a coaching course]. Here is the funder's brief: [paste brief].

150 End-of-season awards

Suggest 10 creative end-of-season award categories for a youth athletics group, and write a short speech template for presenting them.

TRACKPLAN

KEEP THE PLAN. COACH THE ATHLETE.

Thanks for coaching. If this pack saved you time, a short review helps a student athlete keep building tools for coaches.
